

CERTIFICATE OF DISINFECTION

This certifies that ServiceMaster Restore has disinfected (Your Company Name) at (Your Address) on (Date in MM/DD/YYYY) at (Time of disinfection job completion).

The ServiceMaster Restore disinfection protocol consists of:

Wearing appropriate PPE as determined by the most up-to-date CDC guidelines and taking your privacy into consideration when it comes to donning and doffing PPE.

Using EPA registered and approved products from the EPA's List N, which specifically meet the criteria for use against SARS-CoV-2, the virus that causes COVID-19.

Cleaning before disinfecting, a step that is required for true disinfection. We apply specific cleaning techniques to reduce reapplication of soil on surfaces.

Disinfecting after a proper cleaning. We always apply the disinfectant following the product label protocol, including selecting the equipment to apply the product and leaving the surface wet for the required dwell time for the disinfection to be effective as specified by the EPA registered label.

Cleaning up discarded materials and single-use PPE, sealing our soiled materials for proper disposal.
